Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics)

William Baylis

Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) William Baylis

The emphasis in this text is on classical electromagnetic theory and electrodynamics, that is, dynamical solutions to the Lorentz-force and Maxwell's equations. The natural appearance of the Minkowski spacetime metric in the paravector space of Clifford's geometric algebra is used to formulate a covariant treatment in special relativity that seamlessly connects spacetime concepts to the spatial vector treatments common in undergraduate texts. Baylis' geometrical interpretation, using such powerful tools as spinors and projectors, essentially allows a component-free notation and avoids the clutter of indices required in tensorial treatments. The exposition is clear and progresses systematically - from a discussion of electromagnetic units and an explanation of how the SI system can be readily converted to the Gaussian or natural Heaviside-Lorentz systems, to an introduction of geometric algebra and the paravector model of spacetime, and finally, special relativity. Other topics include Maxwell's equation(s), the Lorentz-force law, the Fresnel equations, electromagnetic waves and polarization, wave guides, radiation from accelerating charges and time-dependent currents, the Liénard-Wiechert potentials, and radiation reaction, all of which benefit from the modern relativistic approach. Numerous worked examples and exercises dispersed throughout the text help the reader understand new concepts and facilitate self-study of the material. Each chapter concludes with a set of problems, many with answers. Complete solutions are also available. An excellent feature is the integration of Maple into the text, thereby facilitating difficult calculations. From reader reviews:

Jeffery Harman:

In this 21st hundred years, people become competitive in every way. By being competitive currently, people have do something to make these survives, being in the middle of the particular crowded place and notice by means of surrounding. One thing that often many people have underestimated that for a while is reading. Yep, by reading a publication your ability to survive enhance then having chance to stand than other is high. For you personally who want to start reading a new book, we give you this kind of Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) book as beginner and daily reading guide. Why, because this book is greater than just a book.

Richard Diller:

The ability that you get from Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) may be the more deep you looking the information that hide into the words the more you get considering reading it. It does not mean that this book is hard to recognise but Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) giving you thrill feeling of reading. The article writer conveys their point in a number of way that can be understood by simply anyone who read it because the author of this reserve is well-known enough. This particular book also makes your personal vocabulary increase well. That makes it easy to understand then can go along with you, both in printed or e-book style are available. We recommend you for having this Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) instantly.

Susan Bannister:

Reading can called mind hangout, why? Because when you are reading a book specifically book entitled Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) your mind will drift away trough every dimension, wandering in most aspect that maybe unknown for but surely will end up your mind friends. Imaging each word written in a reserve then become one application form conclusion and explanation which maybe you never get prior to. The Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) giving you a different experience more than blown away your mind but also giving you useful details for your better life in this particular era. So now let us explain to you the relaxing pattern this is your body and mind is going to be pleased when you are finished examining it, like winning an activity. Do you want to try this extraordinary investing spare time activity?

Herbert Knight:

Many people spending their time period by playing outside using friends, fun activity along with family or just watching TV 24 hours a day. You can have new activity to shell out your whole day by reading through a book. Ugh, do you think reading a book can actually hard because you have to bring the book everywhere? It all right you can have the e-book, delivering everywhere you want in your Touch screen phone. Like

Electrodynamics: A Modern Geometric Approach (Progress in Mathematical Physics) which is having the e-book version. So , try out this book? Let's find.
