Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change G. Dedrick Robinson, Gene D. Robinson III

Global Warming-Alarmists, Skeptics & Deniers: A Geoscientist looks at the Science of Climate Change, brings a unique geological perspective to this politically charged issue, a perspective that has been ignored far too long. Written by a father-son team of geoscientist and attorney, it is the concise guide to the global warming controversy that has been long needed. As a university professor and research geologist for thirty years, Dr. Robinson knows that geological science is essential for placing the global warming controversy in proper perspective. One cannot hope to understand how humans might be causing climate change without an understanding of the magnitude and speed natural processes are capable of when it comes to climate change. Earth history is the only yardstick we have to determine whether recent climate change is unusual or not. Yet, inexplicably, a vast repository of geologic data has been ignored in this contentious issue. *Global Warming: Alarmists, Skeptics and Deniers* was written to correct this oversight.

This book has been years in the making. It follows the outline Dr. Robinson used successfully for many years in a college classes taken by large numbers of students. Using an easy-to-understand question and answer format, the fourteen chapters of the book cover systematically all the major scientific issues of global warming. With more than three hundred references to peer-reviewed science journal articles and numerous illustrations, it shows how the scientific underpinnings of the global warming theory are actually weak and uncertain

Dr. Robinson is the author of numerous scientific articles in national and international journals. His background in teaching a wide variety of geology courses has shown him how to present difficult scientific concepts in a way that is understandable and interesting to non-scientists. He has chaired sessions at scientific conferences, led seminars for science teachers, served as the head at two different college geology departments and was interviewed on a television network. His co-author and son, an attorney experienced in argumentative rhetoric, has helped him hone in on the erroneously based assumptions underlying activists' arguments. He has also served as a sounding board for areas where the writing, intended for a general audience, needed to be less technical. Together, this unique father-son team present a well thought out and fully documented discussion of the global warming theory without impugning anyone's sincerity, motives or personal integrity. *Global Warming: Alarmists, Skeptics and Deniers* covers the science of global warming, but unlike many other books, not the politics.

From reader reviews:

Lillian Chatman:

Within other case, little persons like to read book Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change. You can choose the best book if you appreciate reading a book. Providing we know about how is important a new book Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change. You can add expertise and of course you can around the world by just a book. Absolutely right, since from book you can understand everything! From your country until finally foreign or abroad you can be known. About simple factor until wonderful thing you are able to know that. In this era, we could open a book as well as searching by internet system. It is called e-book. You can use it when you feel weary to go to the library. Let's go through.

Virginia Warriner:

The reason why? Because this Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change is an unordinary book that the inside of the guide waiting for you to snap the item but latter it will surprise you with the secret it inside. Reading this book close to it was fantastic author who write the book in such remarkable way makes the content interior easier to understand, entertaining method but still convey the meaning completely. So , it is good for you for not hesitating having this any more or you going to regret it. This unique book will give you a lot of rewards than the other book have got such as help improving your expertise and your critical thinking way. So , still want to hold up having that book? If I ended up you I will go to the reserve store hurriedly.

Rhonda Yowell:

Don't be worry when you are afraid that this book will certainly filled the space in your house, you may have it in e-book method, more simple and reachable. This particular Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change can give you a lot of friends because by you taking a look at this one book you have point that they don't and make you actually more like an interesting person. This book can be one of one step for you to get success. This publication offer you information that maybe your friend doesn't recognize, by knowing more than other make you to be great people. So , why hesitate? We should have Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change.

Joann Huertas:

As a scholar exactly feel bored for you to reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just very little students that has reading's spirit or real their hobby. They just do what the educator want, like asked to the library. They go to right now there but nothing reading very seriously. Any students feel that examining is not important, boring along with can't see colorful pics on there. Yeah, it is to be complicated. Book is very important to suit your needs.

As we know that on this time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. So , this Global Warming-Alarmists, Skeptics and Deniers: A Geoscientist Looks at the Science of Climate Change can make you truly feel more interested to read.
