2) Who uses ARM?

Currently ARM CPU is licensed and produced by more than 100 companies and is the dominant CPU chip in both cell phones and tablets. Given its RISC architecture and powerful 32-bit instructions set, it can be used for both 8-bit and 32-bit embedded products. The ARM corp. has already defined the 64-bit instruction extension and for that reason many Laptop and Server manufactures are planning to introduce ARM-based Laptop and Servers.

3) Who will use our textbook?

The primary audience of our textbook on ARM (ARM Assembly Language Programming & Architecture by Mazidi & Naimi) is undergraduate engineering students in Electrical and Computer Engineering departments. It can also be used by practicing engineers who need to move away from 8- and 16-bit legacy chips such as the 8051, AVR, PIC and HCS08/12 family of microcontrollers to ARM. Designers of the x86-based systems wanting to design ARM-based products can also benefit from this textbook.
