Extractive Metallurgy of Copper, Third Edition

A.K. Biswas, W.G. Davenport

Extractive Metallurgy of Copper, Third Edition A.K. Biswas, W.G. Davenport

A completely revised and up-to-date edition containing comprehensive industrial data. The many significant changes which occurred during the 1980s and 1990s are chronicled. Modern high intensity smelting processes are presented in detail, specifically flash, Contop, Isasmelt, Noranda, Teniente and direct-to-blister smelting. Considerable attention is paid to the control of SO₂ emissions and manufacture of H₂SO₄. Recent developments in electrorefining, particularly stainless steel cathode technology are examined. Leaching, solvent extraction and electrowinning are evaluated together with their impact upon optimizing mineral resource utilization. The volume targets the recycling of copper and copper alloy scrap as an increasingly important source of copper and copper alloys. Copper quality control is also discussed and the book incorporates an important section on extraction economics.

Each chapter is followed by a summary of concepts previously described and offers suggested further reading and references.
